# TANK ATTACK™

PIT, TANK, AND BILGE WASTE CLEANER

## Part A: Surfactant Cleaner

Surfactant Cleaner removes unwanted odors and breaks down contaminants so that our Part B oil degrading bacteria can eat away at the unwanted hydrocarbons.

## Part B: Oil-Degrading Bacteria

Our proprietary blend of oil-degrading bacteria will quickly ingest hydrocarbons and establish ongoing degrading conditions where needed.

**EASY TO APPLY | FAST ACTING | NON-TOXIC | EFFECTIVE**

## APPROACH

Much of the waste build up in tanks, pits, and sumps is hydrocarbon based. This includes oils, grease, and grime that are not only difficult to clean, but also produce unwanted odors. Tank Attack uses hydrocarbon degrading bacteria, nutrients, and an enzyme-based surfactant to eat away at unwanted waste that clogs up wash water systems. This solution is proven for sumps, bilges, car and truck wash pits, and wastewater tanks. It cleans and eliminates odors at the same time, leaving your system fresh and free of remnants.

## PRODUCT DETAILS

- Packaged in two 5-gallon pails for easy dilution and mixing.
- Dilution varies based on the volume being treated.
- Apply directly to waste or meter in line to existing system.

## ABOUT BIOSHARK

For over 30 years, our parent company has perfected using bacteria to eat away at unwanted hydrocarbons. After all these years, we're still amazed at how microbes - like sharks - can be so aggressive, and effective in treating petroleum spills. Let's put them to work!
